

How to Descale Taps

You will need:

- Small plastic bags e.g. coin bags or similar.
- Cotton wool.
- Descaler (white vinegar).
- Elastic bands.

Procedure:

- Place some cotton wool in the bag and add some descaler (vinegar).
- Place the bag over the tap end and secure with a rubber band.
- Leave in this condition for reasonable time (overnight if possible).
- When limescale has gone, remove bag, empty contents and rinse thoroughly with cold water.

If the limescale has not disappeared there are two things to try:

1. Repeat the process.
2. Leave longer i.e. weekend instead of overnight.
